

COMPANY OVERVIEW

A Rich History

Leszynski Group has been delivering high-quality, leading-edge information technology consulting and development services to progressive businesses for **two decades**. From intranet to Internet and from databases to digital ink to .NET — we understand the new approaches to digital business and enjoy helping companies design, develop, and deploy solid solutions.

Our Mission

Leszynski Group provides client companies and enterprise software developers with enhanced productivity through the creation of leading-edge processes, tools, and applications, and through the cultivation of the best and brightest information technology talent pool.

Three terms from the Mission Statement above highlight our passions:

- **Enhanced productivity.** In the end, what we deliver is ROI. We work diligently to master the market-leading technologies so that you get maximum value for your IT expenditures.
- **Leading-edge.** The correct and cost-effective use of technology is usually a critical success factor for our clients. So, we master the latest technologies and tools — often years before they are publicly available — in order to design and deploy solutions that leverage the latest innovations.
- **Best and brightest.** Leszynski Group is not a training ground for new graduates or a broker for offshore resources; instead, we seek out seasoned technologists who have at least ten years of custom solution development experience, and we never stop investing in the skills growth of this talent pool.

Our executives and technology team leaders are **recognized experts** who constantly strive for an unmatched quality-of-service level.

Market Leadership

Leszynski Group has always provided **market leadership**; for example:

- In 1982, we were the first consulting firm in the Northwest to write business applications using MS-BASIC.
- In 1992, we were the first company anywhere to use Microsoft Access commercially to develop custom solutions.
- In 2002, we were the first company to build Tablet PC applications and development tools.

Today, Leszynski Group has **more development experience** building customized solutions on the new Tablet PC computer than any company.

We provide corporate enterprises with distributed computing consulting services that include strategies, design, research, and development. Our mobile computing software applications **empower** new types of roving, collaborative, creative, and disconnected workflows.

We also help developers of enterprise and retail software products enable their applications to utilize the new digital ink architecture and run as managed solutions under the .NET framework. We do this through consulting, training, and our powerful **ink application components**.

The Right Combination

Leszynski Group has the right combination of **experience, skills, and tools** to build powerful, fully customized applications. We specialize in integrating our applications with, and extending, enterprise applications from the leading software vendors. We help you create solutions that improve the flow of information throughout your business while ensuring the highest level of reliability, scalability, and system performance.

Distributed computing has changed the economic landscape, as companies reach out over private and public networks to connect more effectively with customers, suppliers, business partners, and their own staff. We help you integrate software solutions **across the enterprise** in order to maximize the communication and collaboration benefits of distributed applications and corporate data.

Areas of Expertise

Our **superior skill set** includes the following areas of expertise:

Methodologies and Academic Disciplines

- Software Architecture Design
- Database Design
- Mathematical Theory of Formal Programming Languages
- Categorical Basics of Data Modeling
- Accounting Systems Design
- Programming Languages, Compiler Design
- Cryptography and Security
- Relational Database Modeling
- Neural Networking and Artificial Intelligence

Language Skills

- C/C++/ATL
- C#.NET
- Visual Basic, Visual Basic.NET
- Advanced COM, COM+
- XML, XSLT, VML, WML
- ASP, ASP.NET, Scripting
- DirectX and Windows Media SDKs
- HTML, DHTML, Flash

Database Technologies

- SQL Server
- Oracle
- Access, FoxPro
- T-SQL, PL/SQL, SQL*Plus

Operating Platforms

- Windows
- Windows Tablet PC Edition
- Windows.NET
- Windows CE
- Active Directory
- Palm OS
- Unix, HP-UX
