Weil, Gotshal & Manges LLP Selects Leszynski Group to Develop Customized Tablet PC Legal Application for Worldwide Deployment

NEW YORK — November 7, 2002 — Weil, Gotshal & Manges LLP and Leszynski Group announced today that NoteTalk was demonstrated at multiple Windows XP Tablet PC Edition launch events throughout the United States. NoteTalk will provide Weil Gotshal's attorneys with a comprehensive Tablet PC-based application that leverages the power of the digital inking technologies in Windows XP Tablet PC Edition to collect and organize legal information. Handwritten notes are synchronized with voice recordings, user bookmarks and sections of associated documents. NoteTalk is being developed by Leszynski Group, a premier provider of custom software development and consulting services. Financial terms of the agreement were not disclosed.

Weil, Gotshal & Manges LLP is one of the world's leading law firms and has over 2,400 employees located in offices across eight countries. The Firm's attorneys and paralegals take extraordinary amounts of handwritten notes, create presentations and drawings, and collaborate with their colleagues in other offices as well as with their clients. Over 3.5 million typed documents and countless additional handwritten files and information must be cataloged, filed, and stored or converted manually into electronic text.

"Due to Weil Gotshal's size and the number of diverse industries we serve, our document management process requires a significant amount of the Firm's technological resources," said James McGinnis, Chief Information Officer, Weil, Gotshal & Manges LLP. "We chose Leszynski Group to create NoteTalk because they carefully listened to our needs, possessed the in-depth technological and development experience creating Tablet PC applications that we required, and they provided us with extremely rapid turnaround."

“Weil Gotshal has traditionally been very progressive in its adoption and deployment of information technology,” stated Ron Stephens, president of Leszynski Group. “NoteTalk really brings the full force of Tablet PC benefits to bear on Weil Gotshal’s business needs by combining digital ink, speech, document mark-up and portability. Client service is ‘job one’ for the firm’s IS department and the NoteTalk application adds a powerful tool to assist in accomplishing this goal by providing clients and attorneys with the latest communication and collaboration innovations.”

Leszynski Group is developing NoteTalk using Visual Studio .NET, the SDK for Windows XP Tablet PC Edition, and customized extensions of Windows Media Player for recording voice notes. Weil, Gotshal & Manges LLP will begin widespread internal distribution of NoteTalk for the Tablet PC in the first quarter of 2003. The application will be available in multiple languages including American and UK English, Czech, German, Hungarian, and others as they become available.
