

Leszynski Group Launches Training Products for Tablet PC Solution Developers

Training accelerates Tablet PC momentum

BELLEVUE, WA – June 17, 2003 – Leszynski Group, Inc., a recognized leader in customized solutions for the new Tablet PC, announced today the availability of five key training courses for IT technicians and decision makers considering or undergoing a Tablet PC deployment. Under the "inDepth™ Training" brand, Leszynski Group provides onsite, customized training that teaches rapid solution development and deployment strategies for the Tablet PC, using Microsoft's .NET Framework, Visual Studio .NET, and Tablet PC Software Development Kit.

Tablet PCs running Microsoft Windows XP Tablet PC Edition combine the portability and creativity of paper with the computing power and wireless connectivity of a laptop. This combination empowers mobile information workers with increased productivity and more flexible workflows, whether sitting in a sales meeting, working aboard an airplane, or collecting data in the field. Developing software applications for the Tablet PC requires specialized knowledge of new user interfaces, workflows, and toolsets. Prior to inDepth Training, there was no readily available, personalized, and comprehensive technical training available for the Tablet PC.

"Leszynski Group has a breadth of experience developing powerful tools and applications for the Tablet PC," said Leland Rockoff, Director of Tablet PC Marketing and Business Development at Microsoft Corp. "They are leveraging their experience to offer .NET developers and IT Managers the training they need to deploy Tablet PC solutions that will help business users to be more productive in new ways."

"inDepth Training is managed by our consulting services team and the content is developed by our experienced .NET solution developers," says Stan Leszynski, CEO of Leszynski Group. "We will provide training recipients with ongoing access to our digital ink experts and tools after training ends, providing them maximum value for every training and development dollar spent on Tablet PC solutions."

inDepth course offerings run the spectrum from the "Tablet PC Primer for Non-Developers" seminar for IT managers, to "Digital Ink Development - Building Applications in Depth" for high-end developers. Courses are offered in the Visual Basic and C# languages. Courses are taught by Leszynski Group staff experts and by a national network of inDepth Certified Trainers.

About Leszynski Group, Inc.

Leszynski Group provides companies with information technology (IT) consulting services that include technology strategies, system design, custom software and database development, and technology research. Leszynski Group has been delivering IT professional services for two decades and is located in Bellevue, Washington.
